DOES SPEED OF LIGHT ESTABLISH
ONENESS BETWEEN π & $\sqrt{2}$?
(557th Proof on Rho)

The Sun is spherical and
the emerging light ray from
IT propagates in straight
line.

Similarly circle and
square also inseparable
as inscribed / circumscribed /
superinscribed.

Speed of light = 299792458
meters per second

We can combine straight
line and curved circumference
by the following expression
in relation with the
Speed of Light

$$\text{Diagonal} = \sqrt{2}$$

$$\text{Circumference} = \pi = \frac{14 - \sqrt{2}}{4}$$

$$\frac{\text{Speed of light}}{\sqrt{2} \times \pi \times 16843228.75} = \frac{299792458}{\sqrt{2} \times \frac{14 - \sqrt{2}}{4} \times 16843228.75}$$

$$= \frac{299792458}{7494814.46} = 4.0$$

The COVID-19 Corona Virus is
shaking the World today with its
short span of life. But, unfortunately
3.14159265358 of pi (gamma) has infected
the circle and we are unable to dis-
infect it even after 2000 years.
Thank God
